HOW MODERN PHILOSOPHY UNDERGIRD THE CHRISTIAN FAITH

By Roderick Scott, M. A.
Professor of Philosophy,
Fukien Christian University.

"THE most important single spiritual task before the religious world to-day is the discovery of the use of the presentday intellectual conquests of thought for the enrichment and expansion of our Christian faith." Rufus M. Jones, Christianity and Secular Civilization. Jerusalem Missionary Conference, 1928.

"A CHURCH with foresight and farsight will use the best thought of its age to interpret its message." Maude Royden, quoted in Chinese Recorder, November, 1928.

"TO naturalize religion in the new world, to build the spiritual life without falsifying reality"—H. A. Youtz. "To build a bridge between religion and modern thinking"—H. N. Wieman. "Religion should come to an understanding with the intellectual life of the times in which it lives"—E. S. Brightman. "Christianity needs to receive with a shout the new weapons science has forged for it."—The Christian Century.

IT WAS under the inspiration of and to answer the challenge implied in such statements as these that this essay had its inception.

The department of philosophy needs no vindication in the curriculum of the Christian college, since its primary concern is to teach students to think. But the study of philosophy may do more for the Christian program than that. It may show how "the presentday intellectual conquests of thought enrich and expand the Christian faith."

What some of these conquests are and how they undergird and enrich that faith it is my purpose to show; in outline, only, however, and as suggestions for further inquiry and development; for detailed treatment belongs to courses in philosophy and the philosophy of religion.

Liberal Christianity has often been accused of being a good critic but a poor builder, sicklied o'er with the pale cast of thought. And so, many religiously minded persons are suspicious of thought and fearful of intellectual doubt: "How shall they sing the Lord's songs in a strange land?" Finally the opponents of Christianity point with joy to the supposed bodyblows inflicted on religion by

PHILOSOPHY

modern science. Let the first two groups take heart and the last beware. The future for reflective religion is full of hope.

I realize that 'modern thought' or even 'modern philosophy' is a rash phrase. But just because modern thought is modern, i.e., living, its full description is unattainable. Classical thought is finished and describable. But as we live, thought flows past us, forever unfinished. There is no need for us to attempt to encompass this current of thought in its entirety. The four or five selections I shall make seem to me, even if there were no others, quite adequate to the task I propose for them, viz., the undergirding of religious faith in the modern age.

The 'modern' philosophy herein outlined will be familiar, it need hardly be said, to students of philosophy. I am proposing a program of study, not writing an original system. And students of the philosophy of religion and of theology have long recognized the right of philosophy to inquire into the religious experience as well as the need of religion for philosophic formulation. But, alas, these groups are small; for the rest of mankind, neither philosophy nor the philosophy of religion are familiar or easy subjects and the notion that such an essay into 'applied philosophy' as this might be even more important than applied science would find favor with few, even among philosophers. But how much both education and religious education is another story (I, chap. x. For reference of Roman numerals, see Bibliography at end).

That religion is more than thought or analysis or formulation, even that religion isn't formulation at all, isn't theology or philosophy, philosophy will be the first to admit (See below, Sect. V) Scientific experience isn't science either.* Nor do we suppose that men are convinced of religious faith by means of argument. Nevertheless thought is a part of life and without formulation religious experience (like scientific experience) could not be communicated, fixed, described, understood, even believed in. Philosophy cannot force conviction, but it can make faith easier. This is a point that should be clearly understood, but its treatment does not belong directly to the subject of this essay.

*Wieman (II) speaks of 'scientific experience' as distinct from scientific thought. The experience is the moment of discovery, the moment when a realization of the truth of nature bursts on the mind.

PHILOSOPHY

The special conquests of modern thought that I have selected for the purpose of this inquiry are:

- I. EXPERIENCE
- II. THE NEW NATURALISM
- III. EMERGENT EVOLUTION
- IV. PRAGMATIC IDEALISM
- V. "POLARITY"

I

EXPERIENCE

Experience as a philosophic concept appears in two such diverse quarters as Idealism and Pragmatism.

For Idealism Experience is the clearing-house of all meaning (III). "To treat objects as ideas is to give them an entirely fresh context or 'world'. In the context of experience, are compared our worlds, real and unreal, and within the real, physical and spiritual worlds. Some worlds (of Morals, Art, Economics, Politics, Religion) exist only in the medium of mind." (p. 74)

James's and Dewey's* handling of the term experience, in behalf of Pragmatism, is not so very different, though their interests are more epistemological than metaphysical: to arrive at a synthesis of the 'sterile dualism of subject and object. All is experience and the division now takes the form of analyses of experience. One such is that of experience as doing and experience as undergoing and suffering, the first leading to an interest in means, in instruments, in useful arts; the second to consequences, meaning, and the fine arts, i.e. instrumental and consummatory experience. Another analysis discloses experience as both cognitive and non-cognitive. The latter concept is made use of by the author of Religious Experience and Scientific Method (II) to show how worship remakes the habits (Chap. xii).

Reference has been made to instrumental experience. That this is the chief function of the intellect is the contention of the Instrumentalists, a branch of pragmatism. Without stopping to argue the point, it can be conceded that part

*James, "Essays in Radical Empiricism." Dewey, "Experience and Nature" The analyses mentioned were developed by Prof. Dewey in his course in Columbia University, Philosophy 191, in 1922.

of the mind, at any rate, is a tool-maker, and that concepts are the real instruments for the control of nature. Such a tool-of-all-work has this word *experience* become.

Experience supplies both the source and the norm for all our study.

(1) As *source*. We begin always with experience a new phase of scientific method. Formerly we tested by the experiment, i.e. the controlled experience, now we *begin* with experience; experience supplies the data.

(a) It supplies it for psychology and we have a new kind of empiricism; the old kind identified experience with sensation, but for the moderns experience is none the less a starting point.

(b) It supplies it for anthropology. Research must be on the spot. There is no place for parlor anthropologists who have never seen a savage!

(c) It supplies it for religion. What happens in religious experience? That's the place to begin the study of religion, whether psychologically, as in James's *Varieties of Religious Experience*, the pioneer in this field; or philosophically, as in Hocking's "Meaning of God in Human Experience" (IV).

(2) But experience is also *norm* or center of reference. What doesn't happen in experience, what can't be referred to experience, is not subject for study. Conversely if something does happen in experience, it must be accounted for. "Our world of values, loyalty, friendship, appreciation, does not just happen; it must be explained" (V). "A philosophy which left one portion of human experience suspended without attachment to the world of truth is gravely open to suspicion; and its (Positivism's) failure to make the religious emotion speculatively intelligent betrays a speculative weakness."^{*}

Now we understand the perennial appeal of the Bible; it describes authentic religious experience; we know what inspiration is; a book is inspired when it inspires us, when it checks with experience, when it catches us 'where we live.' By isolating religious experience and examining it, we are able to develop a technique for its practice and enjoyment (II). Of course people have always had religious experience; but only recently has it become an object of philosophic study, i.e. of more than psychologic study. The psychology of religion describes what happens;

^{*}Brightman (II) p. 141 here quotes Mr. S. Alexander, the author of Space, Time and Deity. An English realist.

the philosophy of religion places what happens within the total scheme of knowledge, and may say why it happens, i.e. interpret the significance of the happenings.

A natural criticism of this use of experience as 'be-all and end-all' is that experience is subjective and individual, whereas science or knowledge seeks the universal. But (a) we are dealing with experience in its universal or human aspects. In fact for Dewey, there is no *subject* at all. And (b) Experience or experiment are for philosophy not final tests. Their findings must be subjected to Reason, i.e. to the coherence test (I, page 21), though the phrase 'learn by experience' implies a comprehensive testing that is almost the same as the coherent test.

In still a third way does this preoccupation with experience support religion. It lays once for all the ghost of the charge of "anthropomorphism." What is the universe like? Is it like matter? Then you have hylomorphism (Greek, *hulos*, matter). Is it like a machine? Then mechanomorphism. Mind? Anthropomorphism. We not know what matter is, and machines are all products of mind. Mechanomorphism is thus a double anthropism. (VI) If we are to *know* anything at all, can mind be avoided? Every act of mind (Knowledge) is unescapably tainted with mind.

II

THE NEW NATURALISM

"Let us cry, 'All good things are ours
Nor soul helps flesh more now
Than flesh helps soul.' "—*Browning*

The synoptic, coherent character of the experience test—if it happens it must be accounted for—has driven us to what I venture to call the New Naturalism. We face Nature with this challenge: What are *you* to produce such fruit as man? or from Emerson: "We grant that human life is mean; but how did we find out it was mean?" (V. page 187). Again: "Man is the only animal that knows it is an animal."^{**}

Naturalism is the doctrine that the way all things are is the way nature is: The crucial question then is: What is nature? Once nature was identified with

^{**}See Warner Fite. Moral Philosophy. (quoted from memory)

PHILOSOPHY

nature as known by physics and chemistry. This is the older naturalism, also called metaphysical materialism. A century later, biology having been given admission to 'scientific' circles, we have a newer naturalism, which includes biological phenomena in Nature, though leaning heavily on the non-evolutionary, cause-effect mechanism or determinism of the older naturalism.*

But neither of these naturalisms goes deep enough into the 'nature of things'. The nature of things is—well, it is the nature of things, i.e. naturalism is now realistic. It is also pluralistic: "Matter and energy are real, but so are organization and life and mind and value and logical and rational principles. The world of the physical sciences is the true but not the whole world." (VII, page 242, 252) There are the facts of the external world; just facts as we call them. **And there are the facts of value and valuation. They both are; however related, they both are. The New Nature has place for both, for science, the description of facts and for religion, the evaluation of facts. Man is so to speak, *both* child of Nature and son of God. Philosophy rests its case always on a coherence test; anything less inclusive than this New Naturalism Philosophy cannot abide. Science might be content with less; but that makes clear where science stops, and where philosophy goes on!

III

EMERGENT EVOLUTION

But the New Naturalism has its origin in a system of thought more inspiring than a coherence test. This is the use of the term by Lloyd Morgan in his book, "Emergent Evolution" (VIII). "My doctrine," he says, "is monistic and naturalistic."

Briefly the history of Emergent Evolution is somewhat as follows: Morgan says in his preface that the notion had been in his mind for fifty years, since he first began to study biology under Huxley. He began publishing articles in 1895; his final position occurs in the book referred to, which constituted the Gifford lectures for 1925. Other thinkers in the same line are: Sellars, in his Evolutionary

*cf. "Heredity, environment, education yield only an *expectation* of the normal, not an *assurance* of the inevitable." E. A. Singer, Modern Thinkers and Presentday Problems, page 89.

**cf. L. P. Jacks, "Is there a Foolproof Science," Atlantic Monthly, 1925?

PHILOSOPHY

Naturalism (old style); more recently S. Alexander, in Space, Time and Deity; also Hobhouse in Development and Purpose. Back of Emergent Evolution is Creative Evolution. Bergson set himself to prove that Spencer's mechanistic evolution of the 19th century wasn't evolution at all, was in fact a contradiction in terms; for if you're going to have evolution it must make something new, must create. Morgan does not oppose Bergson but proposes a clearer idea of the process than the French philosopher's. Creative evolution proceeds, so the theory states, by successive *emergents*.* The hypothesis has proved a highly stimulating one and has been seized on by a score of thinkers. "Morgan's and Alexander's nisus (*striving*) toward ever higher creative syntheses, is Smuts' Holism, Hobhouse's co-operation, Whitehead's principle of concretion, Pupin's creative coordination, Hocking's Whole Idea." (II, page 53)

To put the matter, very crudely, I fear, what we have in cosmic evolution is a process of more and more complex organizations, a process called integration, the making of 'wholes'. The advance is not by *adding* something new but by the arrival or emergence or creation of a new organization of existing elements of such a type as to display new qualities. The new thing is the new quality, and Bergson's demand for novelty is satisfied; the old units are still at the service of, nay at the command of, the new; here is that continuity on which Spencer's philosophy rested. This last point needs some emphasis: The Emergent commands. The new redirects the old; biology has both chemistry and physics at its call; ethics redirects the instincts. It may even be at war with the old in the creative process of adjustment. So Huxley in the famous passage, "Man as ethical being must fight the cosmic process," he thought. Man is not quite 'at home' in nature. There is a tension between the levels, there is a place for creative strife (VI). The latest name used now by many who may not associate it any longer with Morgan is organicism.

At first we have the electron, itself a system, not a mere unit. Perhaps there are no units any more, except the counting units of mathematics. Electrons combine and interact on the new atomic level; molecules are a new combining and interacting of atoms; they display molecularity; they are no longer 'mere' atoms.

*I have avoided Morgan's new and highly technical terminology.

PHILOSOPHY

The word 'mere' is thus banished. Because a thought may have a nervous correlate, it is no *mere* nervous act. And a cup of cold water given in Christ's name is never again a *mere* cup of cold water. "Emergents are what they do, not what they come from" (V, page 123). So Hobhouse: An emergent is not limited by the conditions of its genesis. The genetic method or test has no place in evolutionary philosophy.

To continue: from molecules at a stage of their progressive integration emerges a new quality, vitality or life; from cells in turn, a new quality, mentality or mind; from mind, spirituality, personality and society. It should be noted that a person is here conceived of as an organization not an organism; organism is the term for the vital not the mental organization; similarly we should no longer speak of society as an organism.*

If it is fair to speak of Religion having in the last years domesticated evolution, we now have Emergent Evolution domesticating religion, especially spiritual religion, or Christianity.

- i. Emergent Evolution establishes the place of Spirit.
- ii. Emergent Evolution emphasizes the fundamental characteristic of religion, value or quality.
- iii. Emergent Evolution vindicates the rights of personality.
 - i. Emergent Evolution establishes the place and relations of Spirit.
 - a. Spirituality is an emergent quality dependent on finer organizations of mind. To the higher values when organized in a dynamic harmony we give the name spiritual: and this is a correct use. Not every person has spirituality; for some it has not emerged; when we have it, we are on our way to heaven; when we don't...
 - b. When it emerges it rules. For as we have seen, the emergent commands. We can now understand the Spirit's demands for complete surrender (strait is the gate; have none other gods but me). This has a metaphysical as well as a psychological basis. Forgiveness as remaker of the personality, as worked out by Wieman (II), illustrates this point well. Love remakes the elements of personality, so as to

*As to *how* emergents emerge, the hypothesis is silent. "I am agnostic here," says Morgan, "I can only take this with natural piety." Shall Science ever know the final *how*? But when self-consciousness has emerged it can guide its own emergents; heaven can be won!

PHILOSOPHY

destroy the causal agency of evil, i.e. the bad habits of the past, and makes a new self emerge which takes command with a new set of habits. The so-called pragmatic defeat of evil carries out the same method.

c. Jesus takes his place in the evolutionary scheme as an emergent; his new qualities are those of a finely, or a perfectly balanced personality.

d. Miracles are emergents. They were in Jesus' case acts of a perfect organization. When men perform miracles now, of conversion, of healing, or science, these are emergents. "When we learn a new law, we can do a new thing."*

ii. Emergent Evolution emphasizes as its main thesis that upon which Religion has always stood: quality. Think again of that cup of cold water; and of the gift of the mite, and of the woman who washed the Master's feet. "The quality of your deed will last forever," Jesus said to her. In this interest in quality, Religion has seemed always at variance with science whose interest is quantity (the metrical).* Well then science will have to change its ideas or its position, probably the latter. For in Emergent Evolution what distinguishes levels is quality. Whitehead has gone so far on this line as to say that for science even quality is more fundamental than quantity.** Of course quality is not value, but value, religion's interest, continues the succession. In the last analysis truth is a value and a quality. And value-theory, the new science of Axiology, has become the latest battle-ground of thought.***

Note in passing as further service of spiritual religion that in emphasizing value with its inevitable hierarchy**** we have got rid of tendencies to pantheism or any flat monism; the theory of levels prevents that.

iii. Emergent evolution vindicates personality and freedom against the attacks of some forms of psychology against a Self. The Self is an organization; freedom is the whole self in action; it is an emergent, though we grant that it rarely happens. Man does not have much 'freedom', though probably all he can stand. (VII, chap. on Freedom).

*H. E. Fosdick. "The Modern Use of the Bible."

**Eddington, article in Science, Religion & Reality.

***I quote this from memory.

****Art., Value Theory, by Urban, in Philosophy To-day, ed. by E. L. Schaub

IV

PRAGMATIC IDEALISM

Idealism is *the* philosophy of religion; yet in America at least it would be more natural to say that Pragmatism was. A student of mine after reading James's Pragmatism, said it was old stuff to him; *that* was *his* religion. Now Idealism and Hegel were attacked by James; and Idealism and Plato are attacked by Dewey (IX) and by the Realists. But if Idealism goes out so does religion, at least Christianity, unless we should suppose, which I cannot, that Humanism is a proper form of Christianity.

It is my contention that both attacks are upon men of straw. James opposed his vivid, open world, where contingency was real to Hegel's "Block universe" where nothing can happen. Yet Hegel did a great deal to advance the cause of evolution; perhaps he did not mean a block world. Science: where does science stand? It's on the side of Idealism. Not just anything can happen; only certain things can happen; pure pragmatism, which is the true opposite of Idealism not realism. Idealism is realistic (so Platonism, see below). Realism is only opposed to Idealism on the epistemological side, which is largely abandoned by Idealism to-day. Modern idealism is interested like Plato in the metaphysical question: the world is not merely describable, it is interpretable (VII). In fact philosophy comes pretty close to *being* Idealism. As for Dewey (IX), his correction of Plato's onesidedness with its other-worldly and fixed Idea-patterns is sound, but careful students of his insistence that philosophy become applied philosophy only and serve the interests of society are met always with this, that though he seems to be on his way, he doesn't know where he is going. In the name of democracy he has abandoned God and his goal (I, page 145). This is the usual criticism of pragmatism, of course. In short here is a method and an emphasis not a program. An unbiased observer of the tangle would remark that mankind wanted both an open and closed world, both adventure and character, both discovery and law; mankind is a funny kind of thing that wants two contradictory things (Sect. V). The double want, satisfied and recognized, is what Adams's Pragmatic Idealism has to offer (X). With it we are back on the pluralistic basis of our New Naturalism; in fact we are developing that very thesis.

"There is room, in the total economy of life's interests for the attitude and motive of possession and participation in the significant structures of the real, as well as for the adaptive behavior, the response to a stimulus, the struggle and remaking of pragmatism, for knowledge as well as for desire. There are in short both pragmatic and non-pragmatic interests. The Platonic insight expresses a sense of givenness, of living and knowing in a world not empty of all but our striving and activity. There is a solidarity between mind and reality." (X, page 166).

"By reality, idealist and realist alike mean that which first is and afterward is in accord with our purposes. In the order of our existence we are first passive and then active." (IV, page 161)

This is very obviously the first procedure of science, to *discover* and accept, however harsh the truth; and though our views of, say, the curvature of space change, no one supposes that space was once flat and is now curved.

There are two ways of showing the significance of the problem:

- i. The metaphysical problem of the reality of value.
- ii. The moral problem of activity in a perfect world.

i. "He who says that value is a postulate and not a fact, an aspiration, a purpose, not a matter of experience, is bound to account to us for the source of these ideals and purposes. Ideals do not come out of the void....It is on the spur of experience that our wills adopt their aims and their deepest meanings. What is present in ideal is first present in independent reality" (IV, p. 161) Most people would grant this point for truth, or Reason. Idealism makes the same demand for moral rationality or morality (I, chap. ii). The nature of things is moral. We do not know all the content of the good; but neither do we yet know the content of the true.

An interesting vindication of this belief has arisen of late from an unexpected source, the science of biology. Briefly the argument is: Self-protection, struggle for existence, survival are fundamental; life is insurgent, everywhere is manifest the will-to-live. Well, why? The only answer can be that *life is good*. Biology rests on ethics, just as *all* science rests on logic. These are structures of the world.* (VII)

*See art. by Urban in *Philosophy Today*, above referred to.

ii. Pragmatism was a protest against the failure of Idealism to provide the moral man with a job. Pragmatism is on the side of Practical Reason (Kant) and of the practical life. The world *is open*, but how far open?

A bit of observation, a little study of experience *as she is* might have given the pragmatists a little pause here, if they had thought to make it.

Where does the greatest amount of world-changing take place, among idealistic or non-idealistic peoples? Idealists in their service and sacrifice to make the 'world-desirable' may be denying their creed, but the evidence of history is that the idealist and not the realist works at the job. In fact idealism seems to mean to make better; and idealists are called foolish idealists by 'realists' who say the world can't be changed! A paradox is here:

"All's law, yet all's love"—Browning.

And until we can domesticate this paradox, we shall not be content. That is what Pragmatic Idealism does. Let us continue with our problem.

We speak usually of ideals as of what ought to exist. "An ideal," my psychology colleague informs me, "is an habitual emotionalized concept of an improved future,"—a correct *psychological* definition, but the *ought*, is personal not objective. The ideals, the structures, exist; and *we* ought to act on them. Pragmatism makes or remakes the concrete individual. Ideals are not dreams; they are discoveries. The idealist is a man with *in*-sight. Metaphysically speaking we are not making the ideal real, we are making the real particular. The analogy and parallelism of rationality should help us. A rational world does not paralyze thinking, nor does a *good* world paralyze moral effort. "Participation in structures which he does not create," to use Adams's language "far from lessening his capacity for moral achievement and mastery steadies and enhances it." (X, page 241). In the language of religion, when a man begins to believe in the God of Jesus, a God of truth and goodness, he begins to feel good for something, as Bishop McDowell used to remind us.

How congenial our restored Idealism is to Christianity! God *is* love. Men are brothers; they *ought* to act *as* they are. The pure in heart see God. The light *is* in the man; *e-duco*, educate, is to get it out. Here lies a moral *law*, love's realism, as stable and potent as, let us say, mathematical realism.

Goodness and reason are structures like the skeleton of a building, which may be built for a thousand selected purposes. "Our study tends to confirm the assertion of ideal laws and structures which judge the desires of the natural man." (I, page 70). If you want to be reasonable, you must conform to the laws of logic; to be moral, to the laws of goodness; to be beautiful, to the laws of beauty; to be holy, to the structures of holiness (XI).

This does not mean that we know yet these laws of logic or goodness or beauty or holiness, though we have made some discoveries that will stand. Perhaps what we know least about is logic, which introduces my last topic.

V

POLARITY. ALTERNATION

Amidst the current attacks on religion, little notice is paid to logic, which it may be said, is in a worse way, Bacon had successfully attacked Aristotelian deduction, as shown so brilliantly in The Reconstruction of Philosophy (IX, chap. ii); in fact Bacon and Dewey have much in common. But Bacon's "logic of discovery," induction, has lost much of its force from the more modern realization that a "law is a statement of a fixed relation between phenomena," that "laws are just statistics."* The truth is a new science of philosophic logic is called for.

A feature of the new logic will be its clear handling of the paradoxes and dichotomies of experience.**

Once again we start with scientific observation of experience. "An inevitable dualism bisects nature, so that each thing is a half, and suggests another thing to make it a whole"—Emerson. (XII, page 2). The reference is to Chas. W. Gilkey's "Presentday Dilemmas in Religion," in which the solution by *Alternation* (see below) is developed through a series of dilemmas or paradoxes or contradictions of experience. This is a fascinating subject for research and application, but it can but briefly be dealt with here. It is as old as the Yin-yang; it received treatment at the hands of Aristotle in the Golden Mean and of Confucius in The Art of Life (Chung Yung). Our common treatment of this feature of our experience is by a

* See Eddington's article in Science, Religion and Reality.

** See Henry Churchill King, Living, chap. ii,

PHILOSOPHY

sort of division of labor; we divide society into thinkers and actors, into conservatives and radicals. But this is wrong. An expert handed in a bill for \$50.00 for repairing a farm engine.

For ten minutes repair \$ 0.25

For knowing how 49.75 \$50.00

And as for conservatives, how many radical scientists and politicians are conservative in religion! We have neglected the rights of the whole man; this duality is *within* the self. We shall not be satisfied, as I have indicated above, until we can satisfy *both* demands within a single life. "I must be seeking and be having, I must both move and repose," says Von Hügel (V). Because the two sides are complementary or function circularly,* the term polarity seems to fit this peculiar 'illogical' phase of experience and life. Alternation is Hocking's (IV, chap. xxviii) word; we understand alternation or rhythm in the relation of work and play; we see also in Hocking's masterly handling of the idea the alternation between not merely parts of life, which would give an endless and almost monotonous rhythm, not much better than a sterile 'golden mean' but also between the part and the whole. The whole-experience is worship, the final act, the absolute act, the act of re-creation and therefore *of creation*.

How fruitful this concept is for religion and for the controversies of religion must be immediately evident. Transcendence, immanence, grace, freewill, spirit and mechanism, saving and losing life, service and prayer, the narrow gate and the abundant life, self-denial and self-worth, the worth of the individual, the law of the ideal, the love of God and the 'wrath' of God (*The Wholly Other*, XI), Mary and Martha, they all slip into place in the rational religious life *now*.

IN SHORT, in at least these phases of modern thought and philosophy, Christianity is thoroughly at home. Under their aegis, it need not fear the attacks of thought or knowledge (science). There should in future be an alliance between philosophy and Christianity for further conquest; in turn we should see to it that the kingdoms of thought should become the kingdoms of the Lord, even if we cannot transform our political kingdoms.

* "Physical energy sublimates itself into zeal and zeal stimulates the body." Whitehead, *Religion in the Making*, p. 186. Belief follows experience and is renewed by experience, another example.

PHILOSOPHY

NOTE: A word of explanation is doubtless due for the free identification made in these pages between Christianity and religion. Here is another topic for inquiry. "Is it too much to say that Christianity represents the main line of the religious development of the human spirit?" The quotation is from an inaugural address of Prof. Clement C. J. Webb. A man can be religious without being Christian, of course, but if he begins to study religion in company with *modern* philosophy he is driven Christward. "This isn't Christianity," said a student of mine, "this is just psychology!" Of course Christians have always held that Christ *is* the center of life; it remains now for a philosophy of Christianity to prove that He *is* the center of *thought*. Clearly the department of philosophy in the Christian college in China or America has its work cut out for it!

BIBLIOGRAPHY

References are made by means of Roman numerals.

The list is by no means exhaustive, and each teacher will have his preferences. And even as I write more new books are being turned out for our use and inspiration. It is not always easy even for the professor to keep up-to-date!

，銀鹽得我們教法。

很靈便，暫住這裏吧。他們出來的事，大半是回頭看來的結果。那先生一聽，連忙說：「謝謝先生，我本來想請你到別處去，因為這裏太吵了。」

卷之三

(甲) 性質
子 中外信使間人情會的圓體。

丑 不好空派，機會，與圓界。

寅 哪麼求中國政事的進化，與社會的改造。

卯 哪麼付世界人類社會的改良。

辰 促進國際關係的改善。

(乙) 聖旨
子 打破聖經舊約全書之圓體，恢復聖經真義。

丑 打破舊約全書之圓體，恢復聖經真義。

寅 打破舊約全書之圓體，恢復聖經真義。

卯 打破舊約全書之圓體，恢復聖經真義。

辰 打破舊約全書之圓體，恢復聖經真義。

(丙) 事實
子 本社專重社會員精神之圓體，期以社會為一實質。

丑 紛紛塞會下別開書室：

寅 證行各體「退修會」及「對讀會」。

丑 並行各體「生命知識書」。

寅 文字傳述。

(丁) 實驗
子 諸人年來五元款每年十月開發付。

丑 正 文字傳述。

寅 子數器部教會奉訓課內對外一切事務。

丑 王 教會傳部組成團體辦事。

寅 具有誠貞二人以上之提名，證本社社員會通者，皆可入社。

最近五十年有好幾點很像歐洲文化復興的一個時期。在那時，不能看成不重要的，就是一個道德的時期。然而道德是反動的，不能持之久的。不過那時，是要使人厭惡的。這一點和從前一樣。不過那時代和文化復興時代相比較，有一點不同之處。那就是當時社會的道德比以前更重。此外一種極大的需要，就是前一時期，那更重要。此外一種極大的需要，就是前一時期，那更重要。此外一種極大的需要，就是前一時期，那更重要。

：「今天吃喝，明天要死！」這種標榜，生活便是無用的。凡是最不喜歡勞作的東西，沒有固定的標榜。窮鄉僻壤，生活便是無用的。他被擋，然而他被擋，終要因破壞而進步。他能：

「生命必須是一幅大畫面，纔能滿足他的靈魂。他要『死』——像的看透，
他看『上帝』是死了一回。他在他的精神生命的靈魂上鋪滿
一幅新的畫面。他要回來相認。根據此點却要發美學上最簡單的看透，
『生命的靈魂是死神的靈魂』。因此死——

尼采重慶哥羅斯道體改進的樂隊，我覺得葛理斯的
一箇音樂家之心，是一切好生活的需要品。誠有了這些品
種，一個美術家才能達到成功的地步。」

比愛迪生還早，因爲他本來就是一個發明家。在他們的書架中，會發現實驗室裏包藏在美學之中，因此這兩位發明家看來，比愛迪生、能是算得上的一點。在他們的生活非以科學為本的那幾個人中，因而是偉大的。這兩位發明家的頭腦上是更聰明的人一樣。這兩位發明家在實驗室裏所得到的最重要的財富，就是他們自己對自己的重要性。這兩位發明家在實驗室裏所得到的最重要的財富，就是他們自己對自己的重要性。這兩位發明家在實驗室裏所得到的最重要的財富，就是他們自己對自己的重要性。

「這問題建築學是兩種根本的必要的美術。舞蹈是建築學上。原書三十二頁上記：

『舞蹈與建築是兩種根本的首要的美術。建築的美術就是一個人身體的美術之源流。結果是這兩種美術聯合成一個的，圓柱，圓錐，球體，是能發揮出的大源流發出，雕刻萬能的藝術的美學以外，沒有別的根本美術。因為這兩個建築首要的美術之外，還有別的大源流發出。於是，圓錐，一切繪畫的美學，建築的美學，都是我們所知道的舞的美術的舞者了。舞的美術就是我們所知道的人類未來能辦大一。舞的美術是我們所知道的人類未來能辦大的美術，是原人的美術。宗教的舞是我們所知道的人類未來能辦大的美術，是原人的美術。』

有結果。其實，你說天蠍女已經有了數十年的工齡，應該

其實也是不可以形容人的品行。當然，這個人要現世其
舉。用英文的人可以用 fine 及 fair 等字，形容人的姿
勢。其實，你說天蠍女已經有了數十年的工齡，應該

四

裏的理想的標準。這樣的生活是極美的，並且是很可取的。

(六) 計劃未來

將來的事情做不好的心態。

所謂計劃他就是預見，預告他所要達到的目的。

我們的計劃不是有力量的計劃，正起舞力量的計劃。

生活的「神經病」。這雖然不是力量的計劃，正起舞力量的計劃。

「一種科學，倘使他的基準含有神經病的病徵，那是我的目的不是不過最多得一點點力。」這種計劃我太瞭解問題了。

「我就是那種能夠用盡的計劃，我還不知道看見火雞。

自電線搭的人來說他所要達到的計劃的威力，就是能舉手舉腳的計劃。

「我就是那種能夠用盡的計劃，我還不知道看見火雞。

所注意的事實，你又可以相對的說。我們可能把一切人身上所具有的優點和缺點都說出來，但
