Swen Ta-shuen
(Dah) 1935

December 10, 1946

TO WHOM IT MAY CONCERN:

This is to certify that Dr. Swen Ta-shuen
() graduated from Ginling College in 1935.
Following graduation, she taught science in middle
schools for a few years before taking the medical
course at the Women's Christian Medical College in
Shanghai.

After she received her M. D. degree, Dr.
Swen was a resident of Margaret Williamson Hospital
in Shanghai for one year. Since 1943, she has been
on the staff of the Children's Hospital in Shanghai.

During her College years, Dr. Swen main-
tained a very good scholastic record. She has a
pleasant personality and strength of character.

It gives me pleasure to recommend Dr. Swen
for your kind consideration.

Very sincerely yours,

YFW:hp

Yi-fang Wu

Request of Mr Edward

NAME: Swen Yen-djen

SEX: Female

AGE: 29

NATIVE PLACE: Kiangou

MAJOR COURSES:

1. Child Welfare Problems
2. Social Case Work
3. Social Group Work
4. Social Psychology
5. Nursery School
6. Children's Case Work
7. Thesis: "Sex Education for Children"
8. Field Work in Child Welfare

PRACTICE CENTER:

1. Child Welfare Center, Ginling
(3 hrs. a week, 1944-45)
2. Child Guidance Service, Ginling College
(3 hrs. a week, one term)
3. Child Welfare Center, Ginling
(Full time, summer, 1945)

DATE OF GRADUATION: Spring, 1946

WORKING PLACE: 1. Name of agency: at home, taking care of her own baby.

DID SHE RECEIVE SCHOLARSHIP OR AID BEFORE?

Yes, she received a scholarship in 1945-46.

PRESENT ADDRESS: c/o Mr. Ted Djeng-I, Treasurers Office, Cheeloo University,
Chengtou Szechwan

Tang Ih-wen
(Mrs Chung)
1935

December 2, 1948

Miss Marybelle Bouchard
U.S.I.S.
Kwo Fu Lu
Nanking

Dear Miss Bouchard:

It gives me pleasure to recommend Mrs. Chung Tang Ih-wen, who is applying for an A.A.U.W. scholarship for the year 1947-48.

Mrs. Chung graduated from Ginling College in 1935 with a major in Political Science and a minor in History. She came from a family of prominent scholars, and is keenly interested in writing. During her student days, she showed exceptional understanding of general affairs in China and was active in extra-curricular activities. After graduating, she became a successful teacher in the well-known Nankai Middle School for some years. When the U.S.I.S. was established, she rendered good service in the Library of that organization in Chungking.

Mrs. Chung has had considerable experience in translation and journalistic work. Her wide contacts with current affairs should equip her to be a good representative of Chinese women in America and enable her to make good use of her advanced study after she returns to China.

I am happy to recommend Mrs. Chung for your kind consideration.

Very sincerely yours,

YFW:hp

International House
Chicago, Illinois
January 28, 1935

Miss Florence Tyler, Secretary
419 Fourth Avenue
New York City

My dear Miss Tyler:

Last September while you were away from the office your secretary replied acknowledging the receipt of my letter of September 17, 1934. I hope you will remember the request which I made in regard to the money which you reserved for my traveling home. As you know, I am holding a scholarship here which is just enough to cover my school and daily expenses. As to traveling I am hoping that the old arrangement made with you through Dean Winton of Vanderbilt University still holds good. I am awfully sorry that I have made many changes regarding the date of sailing, but I am sure this will be the last and final decision.

According to the two-year requirement for professional training in social work, my study period at the University of Chicago should be terminated by the end of the Winter Quarter, March 15, 1935. After a consultation with the Dean of the School I finally decided to go home in March of this year. Do you want me to write to Mr. Charles Hurrey of the Friendly Relations Committee myself about when and on what boat I wish to sail? Will you kindly let me know other general procedure of my return passage?

Because of lack of funds, Ginling College has not asked me again to work there since they have a college graduate assisting the work now. There are several openings for me to work in some governmental organizations, but I much prefer to work in the mission institutions. When Dr. Francis Wei, President of Central China College, was in Chicago last November, he asked me to go to his College starting Social Service courses and assuming the responsibility of the Dean of Women. I realize that the salary is low but the responsibility and call for service are fascinating and urgent so I am considering of accepting this position. I shall write you again when I get settled down on the job.

Thanking you again for your kindness.

sincerely yours,

Mingyin Tang

February 6, 1935

Miss Florence G. Tyler, Secretary
Foreign Missions Conference of
North America
156 Fifth Avenue
New York City

My dear Miss Tyler:

Very sincerely yours,

Your letter of February 2 and telegram of February 5 have been received with high appreciation. You have been very helpful in arranging for my return passage and attempting to develop my future career. In accordance with your request for information about myself, I am sending you the following:

I graduated from Ginling College in June, 1928. When I was an undergraduate, I majored in Sociology and minored in History and Education. The fall of 1928 I was teaching History, Geography and Civics in Virginia Girls' High School (mission), Huchow, Chekiang, which was then closed for a while because of Student Strike. From 1929 to 1931 I was teaching History, Geography, Education and Social Problems in Rulison Girls' High School (mission), Kiukiang, Kiangsi, which is my Alma Mater. Since September, 1931, I have been a graduate student on a scholarship or fellowship in three different institutions in this country. During the academic year of 1931-1932 I was doing graduate study in Sociology at Smith College, Northampton, Mass. In 1932-1933 I continued my graduate study in Sociology at Vanderbilt University, Nashville, Tenn. and received M.A. degree that June. From the summer of 1933 to date, I have been attending the Graduate School of Social Service Administration, the University of Chicago. I shall complete the two-year requirement for professional social work here by the end of the Winter Quarter, March 15, 1935. I do not intend to stay any longer as it will take me another full year to complete the work for the Ph.D. degree and much of the additional requirements will not be practical for me to take back to China. The school authorities do not encourage me to work for Ph.D. degree either because it costs the school too much to keep me here for another year. I quite agree with them that professional training is necessary but Ph.D. degree in this field is a luxury. Therefore, I decide to go back to work as soon as I can.

When I was a graduate student in Sociology, my training covered the fields of The Family, Population, Social Pathology, Rural Sociology and Sociological Research. My M.A. thesis subject is Famines: A Sociological Survey, which includes one chapter on "Famines in China." In the School of Social Service Administration, I am specializing in Social Research and various forms of Social Treatment, including Family Welfare, Child Welfare, Psychiatric and Medical Social Work. The training includes classroom courses, field observational trips and clinical social case-work practices (field work). My special interest is in the medical and mental hygiene aspects of the family and child welfare case-work under various situations.

If the information given above is not adequate, please let me

Dr. S. M. Tao

WOMAN SCIENTIST RETURNS

Dr. S. M. Tao Back from Microbiology Congress

CAUSES STIR IN WORLD MEDICAL CENTRES

Among the passengers arriving by the Empress of Canada yesterday was Dr. S. M. Tao, senior bacteriologist and technical expert of the National Epidemic Prevention Bureau established at a cost of over a million dollars for the manufacture of vaccines and sera in Nanking with branch laboratories in Peiping, Lanchow and other cities.

Dr. Tao was sent last summer by the National Health Administration as its official delegate to attend the Second International Congress for Microbiology held in London. Being the first time that a Chinese woman of noble birth and academic attainment was among the gathering at such a conference, Dr. Tao's presence attracted considerable attention.

After the scientific sessions were over, Sir Henry H. Dale, director of the National Institute for Medical Research in Hampstead arranged for her to see the work and study the latest methods used in the principal bacteriological institutes in the British Isles for the manufacture of vaccines and sera in which Dr. Tao has been engaged in this country since 1928 when she left her position as senior bacteriologist at the Michigan State Board of Health.

England as Research Centre

Dr. Tao, trained in the Johns Hopkins University, the leading American medical college, was greatly impressed with what she saw in England which has long enjoyed a reputation for its contribution to clinical and physiological studies. With the establishment of the Medical Research Council, great impetus has been given to research in other laboratory subjects. With the recent Nuffield endowment for graduate medical studies in Oxford and the Wellcome Foundation which will have available for the promotion of medical research the greater part of the income from the house of Burroughs Wellcome & Co., England will be able to offer excellent opportunities as a research centre.

Pursuing her tour of investigation in the continent, Dr. Tao followed the route taken by Sir Arthur Newsholme, former Principal Medical Officer of Great Britain, in connection with his international medical studies on behalf of the Milbank Memorial Fund. She visited the State Serum Institute in Denmark, the Robert Koch Institute for Infectious Diseases in Berlin, the State Institutes of Hygiene in Poland, Czechoslovakia, Austria, Hungary, Yugoslavia and Italy, as well as the Pasteur Institute in Paris where she was well received and accorded all facilities to see everything relating to her investigation.

Six Months With League

Dr. Tao also spent some time in Geneva where she was given a temporary appointment for six months by the League of Nations in order to enable her to be thoroughly familiar with the work of the Permanent Commission on Biological Standardization which is concerned with the establishment and distribution of international standards for biological products used in the treatment and prevention of communicable diseases.

On completion of her work in Europe Dr. Tao proceeded to America to visit the Rockefeller Institute for Medical Research at New York and Princeton, the Division of Laboratories and Research at Albany and the National Institute of Health at Washington. A number of new tests have recently been developed in the United States for measuring the protective value of such products as typhoid vaccine and rabies vaccine against hydrophobia. As the National Epidemic Prevention Bureau in Nanking has for one of its objectives the manufacture of biological products comparable to the best obtainable anywhere in the world, the National Health Administration under the able direction of Dr. J. Heng Liu, has fittingly chosen Dr. Tao for this study mission abroad in order to keep in touch with recent advances.

As a Chinese woman travelling alone Dr. Tao was accorded more attention than usual everywhere she went both professionally and socially. That China could have sent such a woman abroad would have been undreamt of in the days of the Empress Dowager, and the successful mission and safe return of Dr. Tao augurs well for the part that Chinese women is meant to play in the tremendous task of reconstruction in this country.

WOMAN BACTERIOLOGIST COMPLETES WORLD TRIP

DR. S. M. TAO IS ARRIVAL WITH C.P.R. BOAT

Completing a tour throughout Europe and America, Miss S. M. Tao, doctor of science and senior technical expert of the National Epidemic Prevention Bureau in Nanking, arrived in Shanghai en route to the Capital aboard the Empress of Canada yesterday.

Dr. Tao was sent by the National Health Administration as the official Chinese delegate to attend the International Congress for Microbiology in London last July. In commenting upon her visit, the Manchester Guardian in its issue of July 29 pointed out that "women have taken an important part in the development of modern medicine in China, but Dr. Tao was the first medical woman to be sent as delegate to such an important scientific conference."

A graduate of Ginling College in Nanking and of the Johns Hopkins University in Baltimore, and for some years senior bacteriologist at the Michigan State Board of Health and a professor of bacteriology and parasitology as well as a research

Miss S. M. Tao

worker, Dr. Tao was well qualified to represent this country in such an international conference. As the grand-daughter of a former Viceroy of the Liang-Kwang provinces and possessed of a tall and graceful

WELL RECEIVED BY SCIENTISTS ABROAD

figure, she carried herself well in an English aristocratic environment.

Given Every Assistance

After the congress Sir Henry H. Dale, Director of the National Institute for Medical Research in London, made all the necessary arrangements for her to visit and study at the principal bacteriological research institutes in Great Britain. Here she had an opportunity of meeting the leading English scientists and was invited to meet their families, a privilege accorded more readily to a foreign woman than a man.

She created such a favorable impression that Col. D. H. Stevenson, Director of the Government Lymph Establishment in London, went to the trouble of arranging for his sisters to meet her in Glasgow when she was on her way to visit the laboratory of the Royal College of Physicians in Edinburgh.

On the termination of her stay in the British Isles, Dr. Tao left on her investigation tour in the con-

(Continued on Page 14, Col. 1.)

From "China Press" Mar. 10, 1937

Dr. S. M. Tao Returns From World Trip

(Continued from Page 9, Col. 3.)

During her stay in Copenhagen at the State Serum Institute, she was the center of attraction, as it was the first time that a Chinese woman of culture and scientific attainment had been seen there. Her scientific colleagues accorded her a cordial reception and invariably sent representatives to meet her on her arrival at the station in the institutes visited throughout Europe, including the Robert Koch Institute for Infectious Diseases in Berlin, the State Institute of Hygiene in Warsaw, Prague, Vienna, Budapest, Yugoslavia and the Pasteur Institute at Paris.

In Geneva Dr. Tao was given a temporary appointment for six months by the Secretariat of the League of Nations to enable her to study more fully the work in Europe of the Permanent Commission on Biological Standardization founded by the League for the maintenance and distribution of international standards for biological products, in whose manufacture Dr. Tao has been engaged for some years in China.

Visits U.S.

On resuming her tour of investigation for the Government, Dr. Tao also visited the Rockefeller Institute in New York, the National Institute of Health in Washington and other research laboratories in the United States and Canada to study the latest developments and technique for introduction into this country with a view to maintaining the quality of the biological preparations for the treatment and prevention of infectious diseases.

In its program for public health reconstruction the Government has established the National Epidemic Prevention Bureau at Nanking with branch laboratories in Peiping, Canton, Lanchow and Suiyuan at an investment to date of several million dollars for the manufacture of such products. It was in pursuance of its policy of technical efficiency and sufficiency that the National Health Administration under its able director, Dr. J. Heng Liu, sent out Dr. Tao on her worldwide tour of investigation.

0324

A Ginling College Alumna, Class of 1922

(From the North China Daily News of Shanghai, China)
June 17, 1936

HIGH HONOUR FOR WOMAN DOCTOR

Epidemic Prevention Bureau

Head for Europe

Among the notable passengers leaving in the S.S. D'Artagan on Saturday for Europe was Dr. S. M. Tao, technical chief in charge of the manufacture of vaccines and sera at the National Epidemic Prevention Bureau in Peiping, with well-equipped laboratories in Nanking, and branches in Lanchow and Suiyuan.

Dr. Tao is being sent by the National Health Administration on an investigation tour abroad in accordance with the policy of the National Economic Council to keep in touch with the latest scientific developments in the preparation and standardization of biological products. Several million dollars have already been expended on the establishment of modern institutes by the Chinese Government for the manufacture of vaccines and sera in its fight against infectious diseases.

Dr. Tao will first attend the second International Congress for Microbiology to be held in London from July 25 to August 1, to meet the leading bacteriologists of the world for the discussion of current problems on the study of communicable diseases. She is the first Chinese woman to be given this distinction.

After the conference she will pursue special studies at the National Institute for Medical Research, the Lister Institute of Preventive Medicine, and other medical institutes in London, before proceeding to the Pasteur Institute in Paris and the State Serum Institute in Copenhagen, and other European research laboratories.

On her return to China via America, Dr. Tao will visit the Connaught Laboratories in Toronto, the National Institute of Health in Washington to make a study of methods for the control of biological products. In Japan, where great advance has been made in medical science, Dr. Tao will make a study of the organization and work at the Kitasato Institute and the Government Institute for Infectious Diseases in Tokyo.

Dr. Tao is a woman of considerable administrative ability, having come from a family of distinguished administrators. Her grandfather was viceroy of the Liang Kwang Province of Kuangtung and Kwansi and her father for many years was Governor of Kansu. She received her education at Ginling College in Nanking, after which she was awarded a Barbour scholarship in Michigan University, and was the only Chinese to win a research fellowship in bacteriology at the Johns Hopkins University, reputed to be the leading medical institution in the United States.

0325

In America she hold the coveted position as Senior Bacteriologist in the Michigan State Department of Health. On her return to China she was for two years attached to the Women's Medical College in Shanghai as professor of bacteriology and parasitology, but she gave up this chair to assume a position of greater usefulness to the country as technical expert and vice-director in the National Epidemic Prevention Bureau, where her researches and studies on typhoid and other diseases are being recognized both at home and abroad, and where she controls a staff of almost a hundred employees.

Dr. Tao is expected to return to China by next spring, in time to take part in the biennial conference of the Chinese Medical Association and the Chinese society of Pathology and Microbiology to be held in Shanghai from April 1 - 7, 1937, on the completion of the Shanghai Medical Centre.

Health Crusader

Chinese Woman Leads War on Disease

With the world's latest achievements in disease prevention firmly in mind, an American-educated Chinese woman of 40 years, Dr. S. M. Tao, is on her way to her homeland to renew her fight for the health of her people.

And on her way back, Miss Tao stopped in Detroit to visit friends, and to tell of China's accomplishments in the public health field. She is the guest of Mrs. Eva B. A. MacMillan, executive secretary of the Associated Boards for Christian Colleges in China.

"Cholera epidemics have been effectively checked through the establishment, at a cost of several millions, of modern institutes for the manufacture of vaccines and serums," Miss Tao said.

IMITATING AMERICA

"In every large city public health departments now have been established to fight disease. China is imitating America and is making splendid progress."

The daughter of an editor and provincial governor of Kansu, Miss Tao has become a leader in the microbiological field. After being graduated from Ginling College in

Nanking, she came to the University of Michigan under a Barbour scholarship. She was the only Chinese to win a research fellowship in bacteriology at Johns Hopkins University, where she received the degree of Doctor of Public Health. She has just returned from a

—By News Staff Photographer

DR. S. M. TAO

tour abroad, where she was sent by the Chinese National Health Administration to investigate the latest scientific developments in the preparation and standardization of biological products.

WITH WORLD LEADERS

Miss Tao attended the second international Congress for Microbiology in London, discussing communicable disease with the leading bacteriologists of the world, the first Chinese woman ever given this distinction. Later she studied in many research institutes in Europe and America. On her return to the Orient, she will study the organization and work of the Kitasato Institute and the Government Institute for Infectious Diseases in Tokyo.

Miss Tao was senior bacteriologist in the Michigan State Department of Health a few years ago. At home she manages a staff of 100 in research studies on typhoid and other diseases. She said Michigan's health department was second only to that of New York.

In every way an unusual woman, Miss Tao's attire catches the eye. With her American hat, shoes and scarf she wears a Chinese gown and a voluminous Chinese coat of light tan fur.

My dear Miss Griest:

After a parting and absence of so many years it has been a great pleasure to me indeed to have had the unusual privilege of meeting you again during my recent visit to New York. It was not provided for me to return via the States, but I had my travels routed especially by that way in order to have a chance to meet a few of my dear friends in America again, among whom your friendship and affection I value most highly.

The joy of meeting you again I feel is more than enough compensation for the long voyage across the Pacific. I cherish the memory of our pleasant meeting and I trust that we may have another occasion to see each other again, although I have no idea at present as to when I shall be given another leave of absence abroad. However, one can never say and I do hope that one of these days we shall find you coming out to this country to visit us again.

This letter should have been sent to you earlier to thank you for your hospitality and kindness extended to me on the occasion of my brief visit to your place, but I have purposely put off writing to you from the steamer in order that you may know that I have reached home safely when you receive this letter from my native town. I am proceeding shortly to Peiping to resume my work at the National Epidemic Prevention Bureau.

Hoping that this will find you well and with fond regards and best wishes, I am

Yours very sincerely,

Shen Ming Tao

北平協和醫學院細菌部

PEIPING UNION MEDICAL COLLEGE

PEIPING, CHINA

DEPARTMENT OF
BACTERIOLOGY & IMMUNOLOGY

October 27, 1937.

Miss Rebecca W. Griest,
Suite 903,
150 Fifth Avenue,
NEW YORK CITY.

My dear Miss Griest:

Your kind letter of July 28th reached me at a time of such unrest that I have had to put off answering it until now. As you will see from the letterhead and from page 61 of the annual announcement I am sending you under separate cover, I am holding the position as Honorary Lecturer in Bacteriology and Immunology at the Peiping Union Medical College. The Bureau has been obliged to close and the staff disbanded since last August.

You have been very thoughtful to give Dr. Josephine Rathbone of Calumbia University a note of introduction to me. I shall be delighted to meet her and do whatever I can for her on her visit here. The situation is quiet in Peking and I trust nothing will deter her from coming as I am anxious to meet those especially introduced by you.

When I was at Ginling last April I saw Dr. Cora Reeves. In the course of our very pleasant reunion, she did not mention anything about her house or her plans for the future. I have no idea where she is now as she has not written to me so far although, like you, she has a warm corner in her heart for me.

With fond regards and love from

Yours very sincerely,

S. M. Tao

21 January 1941

Dear Dr. Lin:

It was a great pleasure some weeks ago to learn of your marriage, and to be able to look forward to the satisfaction and happiness which you and Dr. Tao ought to find in the days that lie ahead. I am sorry to learn that it proved impossible for her to come with you to this country, but it does not seem so very long ago that she was here briefly.

I hope it is to be possible for me to see you before you leave. Will you not call me at either my office, 150 Fifth Avenue - WAtkins 9-8703, or my hotel, The Parkside, 18 Gramercy Park South - GRamercy 5-6000. Although I am away from New York for a few days now and then, it will certainly be possible for you and me to find the time when we are both to be in the city.

Sincerely yours,

Mrs. T. D. Macmillan
